

# OWSI Filtration and Chlorination Project Update – February 2021

## Filtration and Chlorination Project is Under Way

In January project contractor JMG Constructors broke ground on the project designed to treat water from wells 14 and 16 for manganese and arsenic. Clearing of the construction site started on January 4. At this time the foundation for the building has been installed and the installation of underground utilities are under way. The project is scheduled for completion this fall.

*Site is cleared. Building foundation is being laid out.*

*January 19  
Filtration building forms are ready for concrete.*
